

Gig Driver Mileage & Expense Cheat-Sheet

Stop guessing what you really made. Track smarter, so you know what you actually keep.

1 DAILY TRACKING CHECKLIST

- ☐ **Log shift time** — exact start and end.
- ☐ **Track all miles** — odometer at start and end of every session.
- ☐ **Fuel purchases** — keep every fill-up receipt.
- ☐ **Parking & tolls** — record every fee paid while working.
- ☐ **Phone & accessories** — mounts, chargers, data used for work.
- ☐ **Platform fees** — note what each app withholds.

2 KNOW YOUR PER-MILE COST

Your car costs money every mile — knowing the number helps you pick profitable shifts.

Wear & tear: base **\$0.15/mi**, adjusted for your car (+\$0.07 luxury, -\$0.03 high-resale, age-adjusted; leased = \$0 wear).

Fuel: your car's real MPG (auto-filled from FuelEconomy.gov) at live state gas prices.

Leased? Your wear is \$0 — fuel, fees and tolls still count.

EXAMPLE SHIFT — WHAT YOU ACTUALLY KEPT

Gross earnings	\$235
Vehicle costs (fuel + wear, combined)	-\$43
Estimated tax set-aside	-\$17
Net income (take-home)	\$175

OF EVERY GROSS DOLLAR KEPT

3 ESTIMATED TAX SET-ASIDE HABIT

Put money aside for taxes all year — not just in April. Organized, estimated set-aside numbers based on what you enter become clean tax-season records.

Cleaner numbers for your tax professional mean a smoother season. Your actual tax situation may differ.

Always consult a licensed tax professional for personalized tax advice.

4 QUARTERLY RHYTHM

Don't wait until April. Every quarter: review your mileage log, match receipts to entries, and total what you set aside.

Then hand clean numbers to your tax pro — organized records are the whole game.

Made by the GigMiles team. The app tracks all of this automatically — your exact car, your state, your filing situation.
